Chukwuebuka Ohiomoba

Los Angeles, California | 310 896 6902 | crohiomoba@gmail.com | LinkedIn | GitHub

M.S. Computer Science candidate with 5+ years building and maintaining production data pipelines — dbt transformation models, ELT ingestion across major ad platforms (Meta, Google, Reddit), Python data processing, and root-cause investigation on silent pipeline failures. Strong in **Python, SQL, dbt, and AWS (S3, DynamoDB)**; comfortable owning monitoring and alerting that catch tracking issues before clients notice.

CORE COMPETENCIES

- ELT / ETL Pipeline Development
- dbt Transformation Models
- Python Scripting & Automation
- SQL & Relational Databases
- AWS Cloud Infrastructure (S3, DynamoDB)
- Pipeline Monitoring & Alerting
- Silent Failure Investigation & Root Cause Analysis
- Ad Platform Data (Meta, Google, Reddit, etc.)
- REST APIs & Data Ingestion
- Data Quality & Integrity
- Cross-Functional Collaboration
- Production Data Ownership

PROFESSIONAL EXPERIENCE

Data Analyst (Analytics Engineering Focus) | GEN DIGITAL | Los Angeles, CA | May 2022 – Present

- **Maintain and extend dbt transformation models** across ingestion and reporting pipelines, expanding model coverage to unlock new reporting dimensions and strengthen pipeline reliability for downstream analytics.
- **Designing and building a self-service Python application** to automate the end-to-end UAT ingestion workflow — replacing manual validation steps with a structured, repeatable process; projected to save ~4 hours per week, reduce onboarding time for new analysts and DPMs, and cut data quality issues introduced during manual ingestion.
- **Monitor Airflow DAG runtimes and SLA breaches**, proactively communicating delays and incomplete data to downstream stakeholders so teams can set expectations and avoid decisions on stale data.
- **Lead root-cause analysis for silent pipeline failures and ETL/ingestion discrepancies** across multiple stages — tracing issues through ingestion, transformation, and downstream reporting layers; restored data integrity and **unlocked $3M+ in revenue** by resolving tracking failures and minimizing downtime.
- Identified a **default offer attribution issue** in pipeline logic that revealed optimization opportunities tied to **$100K+ in monthly revenue**, correcting measurement accuracy in downstream reporting.
- **Leverage AWS services (S3, DynamoDB)** for data lake storage and real-time access patterns, optimizing data retrieval and reducing query latency for production reporting workloads.
- Wrote **Python (Pandas) scripts** for complex data manipulation across datasets with millions of records — delivering insights that lowered cost per lead by 20% and supported ongoing data quality checks.
- Defined and **standardized the core metrics layer** (gross profit margin, CPL, conversion rate) in SQL as a single source of truth for Media, Product, and Finance — eliminating conflicting logic across teams and reducing manual reconciliation.
- **Optimized legacy SQL and Snowflake query patterns** for high-traffic dashboards — reducing load times by 2+ minutes and cutting compute/storage costs through improved join logic, clustering, and query restructuring.
- Partnered with Product and Media to build **A/B test infrastructure and analysis pipelines** integrating campaign profitability and quality benchmarks; optimizations identified improved conversion rate by 12%.

Media Strategist | LIQUID ADVERTISING | El Segundo, CA | January 2020 – April 2022

- Worked daily with **ad platform data across Meta, Google, and Reddit** — pulling, joining, and analyzing campaign datasets to identify trends, surface anomalies, and inform A/B test design across creative, audience, bidding, and landing pages.
- Owned end-to-end ad operations across up to **12 concurrent campaigns** — campaign builds, tracking setup, pacing, and daily optimizations — where pipeline and tracking errors had immediate, visible client impact.

Front End Development Intern | TATUM GAMES | Los Angeles, CA | August 2021 – January 2022

- Collaborated on redesigning UI components in HTML/CSS; contributed to code quality standards and development best practices.

PROJECTS

Olist E-Commerce Analytics Pipeline | Personal Project | 2026

Code: github.com/ebukaohiomoba/olist-dbt-streamlit | **Live demo:** olist-analytics-reporting.streamlit.app

- Built an end-to-end analytics pipeline on the Olist Brazilian e-commerce dataset (~100K orders): raw CSVs → Postgres → **dbt** star-schema marts (3 dimensions, 4 facts) → multipage **Streamlit** dashboard with executive-overview and delivery-operations views.
- Authored dbt staging/marts separation with a category-translation **seed**, schema tests for grain uniqueness and referential integrity, and macros for derived fields like delivery deltas and review sentiment.
- Deployed publicly on Streamlit Community Cloud with a **parquet-snapshot fallback** so the deployed app reads frozen mart exports when localhost Postgres is unreachable; published GitHub repo with README, runnable instructions, and tagged topics.

EDUCATION & PROFESSIONAL DEVELOPMENT

- **M.S. Computer Science**, Georgia Institute of Technology — Expected June 2027
- **B.S. Applied Information Management Systems**, Loyola Marymount University — August 2018
- Front End Development Certificate: Technology Career Program, TechBridge — March 2022

TECHNICAL SKILLS

Core: Python, SQL (advanced), dbt, Git **Cloud & Infrastructure:** AWS (S3, DynamoDB), Airflow, REST APIs, ETL/ELT pipelines, data quality frameworks, workflow automation **Data & BI:** Snowflake, Pandas, Tableau, Looker, Google Analytics **Languages & Frameworks:** HTML5, CSS3, JavaScript ES6, React, Node.js, Express.js **Other:** Agile, Version Control, DevOps, Algorithms

LANGUAGES

English (Native) | Igbo (Native) | Spanish (Working Knowledge)

AWARDS & HONORS

Just Go Award Nominee, GoBankingRates — June 2023

AFFILIATIONS

Digital Technology Zone Chair | National Society of Black Engineers | August 2023 – Present
